

BDS Architecture Experience Greater Flexibility And Lower Costs With Cloud Based IT Services

Context

Cloud based IT services enable small and medium size business to work with better collaboration, greater productivity and lower costs. Property advisory consultancy, BDS Architecture, took further advantage of cloud based IT.

Before

BDS wanted to experience more flexible working - including a move to new offices with greater access to e-mails and general business files across their UK and NZ locations, and while on iPhones. BDS wanted to eliminate the need for any on-site servers whilst maintaining back-up for general business files and back-up for larger CAD files. At the same time, they wanted minimal investment outlay and low ongoing IT overheads.

After

Sapien.IT provided a cloud-based solution including: file-sharing and hosted email. The larger CAD files are now stored and backed-up on NAS (network attached storage) devices with mirrored discs for back-up. BDS already have a VoIP telephone system which gave significant advantages and made moving easy too.

Testimonial

Iain Bailey, Director, at BDS said, "I was really surprised how much cloud based services could help our situation and I have been delighted with Sapien.IT's service"

Sapien.IT

Sapien.IT specialise in cloud based services for small businesses and start-up. Clients can mix and match services including hosted email, file-sharing, VoIP, web-sites and other IT services.
